

Physics Mini Project — Evaluation Scheme (20 Marks)

Sr. No.	Evaluation Parameter	Marks	What will be evaluated
1	Concept Understanding	4	Clarity of the selected Physics concept, definitions, principles/laws, and fundamental understanding
2	Depth of Research & Content	4	Quality and depth of research, relevant facts, theories, examples, diagrams, and supporting information
3	Real-Life Applications	3	Ability to connect the concept with real-world applications, technology, industry, or everyday life
4	Technical Accuracy	3	Correctness of scientific terminology, principles, explanations, diagrams, and examples
5	Presentation & Communication	3	Clarity of explanation, confidence, organization, voice modulation, and ability to explain the concept effectively
6	Question & Answer / Conceptual Defence	2	Ability to answer questions asked by the faculty and demonstrate individual understanding
7	Report Quality & Documentation	1	Professional formatting, structure, references, diagrams, and overall quality of the submitted report
Total		20	

Suggested Mini Project Structure

Students should **select any ONE Physics concept** and explain it as a mini project. For example:

- Electromagnetism
- Electromagnetic Induction
- Semiconductor
- Quantum Computing
- Photoelectric Effect
- Nuclear Energy
- Lasers
- Fibre Optics
- Superconductivity
- Relativity
- Wave–Particle Duality
- Nanotechnology
- Renewable Energy
- Any other relevant Physics concept approved by the faculty

Report Submission Format

Students should submit the mini project in **PDF format** and follow a **proper report format**.

Recommended report structure:

1. **Title Page**
2. **Introduction**
3. **Objectives of the Mini Project**
4. **Concept / Theory**
5. **Working Principle**
6. **Important Laws / Principles / Equations** — where applicable
7. **Diagram / Flowchart / Illustration**
8. **Real-Life Applications**
9. **Advantages and Limitations** — where applicable
10. **Recent/Modern Applications**
11. **Conclusion**
12. **References**

Important Instructions to Students

- Select **only one Physics concept** for the mini project.
- The concept should be explained in **your own words**.
- Do not simply copy content from websites or AI-generated material.
- Use **proper diagrams, illustrations, examples, and references** wherever required.
- The presentation should demonstrate **individual conceptual understanding**.
- Faculty may ask questions after the presentation; therefore, students should be able to **defend and explain their project independently**.
- Submit the final report in **PDF format**.
- Maintain a **professional academic report format**.
- Properly mention all sources/references used.

Evaluation will be based on both the submitted report and the student's presentation/Q&A performance.
